The information-packed topics include:

- **Introduction to the “5 Ways In”:** Small and medium sized businesses are challenged on a daily basis to provide the right level of security in the face of growing impact and cost of cybercrime, while balancing the practical realities of limited time, resources, and budget. Learn about the 5 key security risks that companies of your size are asked to tackle and how to protect themselves from the different threat vectors.
- **Exposing the Threats to the SME:** Learn how the emerging underground economy is changing the types of threats and exploiting the vulnerabilities In your network and how you can protect your critical information from malware, increased levels of spam, and data breaches
- **Making it Real—Hacker Exposed:** See a demonstration of today’s most advanced attacks and exploits. Be amazed with the latest tactics and just how simple it is for cybercriminals to penetrate holes within the best defended networks. You will learn the proper countermeasures to protect your business against such attacks.
- **“15 Minutes to Security” Workshop:** In this 90 minute discussion we will take a look at how you can manage your IT Security by using the McAfee 15 minutes to Security practice, walk through the calendar of events and review each step in detail—providing an approach you can take to managing security in your business.
